Front-End Website Handoff Document

Version 1.0 | For UI/UX Designer and Front-End Developer | Brand name placeholder only

Working brand note: the final company name is not locked. Do not design the identity tightly around “Neura.” Use a flexible system that can support a short, modern brand name, likely beginning with the letter N.

Project type: multi-page marketing website for a small-business-focused AI and automation company. The site is primarily informational, conversion-focused, and visually polished rather than technically heavy.

Primary conversion goal: book a call via a contact form.

1. Project Summary

This site should feel like a high-conviction, modern, startup-tech sales website for small and medium businesses that still run too many manual processes. The visual target is bold, direct, and conversion-aware. The structural inspiration is Acquisition.com's current site pattern: immediate value proposition, large headline, clear CTA, repeated proof, offer blocks, testimonials, FAQ, and strong footer architecture [R1][R2][R3].

The website should not look corporate, soft, or generic. It should look sharp, fast, technical, and commercially serious. The user should feel that the company understands modern systems, understands business pain, and can remove operational drag.

The central promise: we help small businesses save time, recover lost revenue, and remove operational bottlenecks through AI-powered automations and custom solutions.

2. Business Context

- Primary audience: small to medium businesses.
- Primary decision-makers: owners, general managers, and operations managers.
- Initial industry focus: broad, not niche-specific.
- Offer mix: pre-built done-for-you automation packages and custom automation / software solutions.
- Positioning: bold and direct, with emphasis on time saved and money gained.
- Conversion action: Book a Call.

3. Strategic Website Logic

The site should follow direct-response logic, not brochure logic. Each major page should do four things in order:

1. Name the pain clearly.
2. Quantify the upside.
3. Reduce fear and confusion.
4. Drive the visitor to one next action.

The site should feel like a guided sales conversation. Each section should earn the next section. Each page should move from problem → proof → offer → objection handling → action.

This mirrors the current Acquisition.com pattern more in decision flow than in exact visual duplication. The current site uses a bold hero, a direct CTA, stacked offer blocks, testimonials / FAQs, a founder credibility block, and additional offer prompts lower on the page [R1][R2][R3].

4. Brand and Visual Direction

Visual tone: startup-tech first, friendly modern second.

- Avoid high-end corporate aesthetics.
- Avoid bland SaaS gradients that feel generic.
- Use dark or near-dark surfaces with bright neon accent energy.
- Keep the site approachable and readable. The glow should support the message, not overwhelm it.

Image-based palette reference extracted from the supplied concept image:

Purpose	Suggested Hex	Usage
Primary background	#0C0821	Main canvas, hero backgrounds, footer backgrounds
Secondary navy	#131458	Alternate section backgrounds, cards, dividers
Electric blue	#5B5DE1	Primary glow, links, active states
Neon violet	#541FA4	Accent glow, icons, gradients
Soft neon purple	#9D5FE0	Secondary highlight, chart callouts
Ice blue	#A8D8F4	Numbers, stat highlights, data accents
White	#FFFFFF	Main text

Layout rule: keep all core value content in the central 70–80% column. The outer left and right edges can hold motion, glow lines, decorative graphics, ambient gradients, or non-essential animation, but should not carry the sales message.

Motion direction: 90% subtle and polished, 10% obvious and dramatic. Dramatic motion is acceptable in selective moments such as hero reveals, the custom-solutions process, or the contact page urgency block.

5. Information Architecture

Primary navigation:

- Home
- Pre-Built Solutions
- Custom Solutions
- Who We Are
- Contact Us

Site structure:

- Separate pages for Home, Pre-Built Solutions, Custom Solutions, Who We Are, and Contact Us.
- Pre-Built Solutions is one long page with internal jump navigation to category sections.
- Category links jump to anchored sections rather than filtering cards on the same viewport.

Global CTA language:

- Primary CTA across most pages: Book a Call
- Secondary CTA on Custom Solutions page: Solve My Bottleneck or Build My Custom Solution
- Hero CTA recommendation on Home: Book a Call
- Button tone should be action-oriented, not passive.

6. Page-by-Page Handoff

6.1 Home Page

Objective: immediately frame the cost of staying manual, make the upside visible, and move the user toward a call.

Recommended hero copy

Recommended headline: Stop Leaving Money on the Table with Manual Processes

Recommended subheading: Replace repetitive admin, slow handoffs, and disconnected systems with AI-powered automations built to save time, recover revenue, and help your business scale with less friction.

Recommended primary CTA: Book a Call

Recommended secondary micro-proof line below CTA: Built for small businesses that need practical systems, not more software clutter.

Alternative headline options:

- Are Manual Processes Costing You Growth?
- Your Competitors Are Moving Faster Because Their Systems Are.
- Outdated Workflows Are Quietly Draining Time and Revenue.

Home page section order

5. Hero: pain-led headline + subheading + CTA + trust strip.
6. Manual vs automated comparison block.
7. What we offer block.
8. Pre-built vs custom decision block.
9. Proof / trust / logo carousel.
10. Testimonials block.
11. FAQ teaser or objection handling strip.
12. Final CTA band.
13. Footer.

Section notes

- Hero should carry the strongest animation and the cleanest typographic hierarchy.
- The comparison block should visually contrast a slow manual company versus an automated company. Use charts, KPI cards, or side-by-side dashboard tiles rather than literal cartoon comparison.
- What we offer should state the two core pillars clearly: Pre-Built AI Automations and Custom Solutions.
- The trust block can use placeholder company logos for layout only. Replace with real proof before launch.
- Testimonials must be marked as placeholders internally. Do not publish invented testimonials.

Recommended stat candidates for Home page

- Safe broad proof: 78% of organizations report using AI in at least one business function [R4].
- Productivity framing: combining generative AI with other automation technologies could add 0.5 to 3.4 percentage points annually to productivity growth [R5][R6].
- More aggressive proof for proof cards only with context: among IBM's AI Leaders, about two-thirds reported AI drove more than 25% improvement in revenue growth rate [R7][R8].
- Operational value angle: among companies adopting AI agents, 66% reported increased productivity and 57% reported cost savings in PwC's 2025 survey [R9].

Important copy rule: do not present the IBM or PwC figures as universal outcomes for every buyer. Present them as directional market proof, not guaranteed client results.

6.2 Pre-Built Solutions Page

Objective: present done-for-you packages that feel tangible, credible, and easy to buy.

Top-page positioning copy: Pre-built solutions are proven packages designed for common business bottlenecks. They are faster to launch than fully custom work and already include the documents, workflow file, guidance, and support needed to get running.

Jump navigation at top:

- Sales
- Marketing
- Admin
- Operations
- Outside the Box

Each jump item should move the user to the selected anchored category section. Other sections can remain below, but the selected section should feel visually isolated and strongly introduced.

Add one eye-catching side widget on this page: a vertical progress meter, animated energy line, or percentage gauge that reacts to scroll depth. This exists to make the page feel interactive and to encourage continued scrolling.

Category section pattern

14. Category intro heading and short paragraph.
15. 4x4 responsive card grid structure, with room to expand vertically.
16. Cards show thumbnail, title, and compact description.
17. Hover state fades or darkens the card and introduces a gear / inspect icon.
18. Click opens a centered modal.
19. Modal shows deeper description, benefits, estimated time saved, estimated money saved, what is included, fixed price, and CTA.

Card / modal content model

- Card: thumbnail, title, 1–2 line description.
- Modal: title, detailed description, bold benefit metrics, what is included, price, CTA.
- What is included: workflow file, installation guide, setup documents, two-hour setup call, launch support, and handover notes.
- CTA: Book a Call.
- Form behavior: the selected package should auto-fill the enquiry field, but remain editable.

Price display rules

- Use fixed pricing for pre-built solutions.
- Avoid rounded pricing. Use specific values such as R4,890 or R7,130.
- Keep simple solutions on the lower side.
- Price block should appear after benefits and what is included.

V1 pre-built solution examples

The examples below are placeholders for product planning, card design, and copy structure. Use official n8n template categories and common business automation patterns as inspiration, but expect final technical scoping per package before launch [R10][R11][R12][R13][R14].

Sales

Solution	Summary	Fixed Price	Est. Time Saved / week	Est. Value / month	What is included
Lead Capture to CRM Sync	Captures leads from forms and channels, enriches records, and sends them into CRM with task creation.	R4,890	4–6 hrs	R6k–R15k	Workflow file, setup guide, handover notes, 2-hr setup call
AI Lead Qualification	Scores inbound leads, tags urgency, and routes hot leads to sales instantly.	R6,240	5–8 hrs	R8k–R20k	Workflow file, setup guide, handover notes, 2-hr setup call
Missed Call Recovery	Automatically messages missed callers and books follow-up actions.	R5,310	3–5 hrs	R5k–R12k	Workflow file, setup guide, handover notes, 2-hr setup call
Quote Follow-Up Sequence	Sends timed reminders after a quote is issued and alerts the owner on high-value inactivity.	R6,980	4–7 hrs	R7k–R18k	Workflow file, setup guide, handover notes, 2-hr setup call
Sales Pipeline Alert System	Flags stalled deals and sends role-based reminders to keep deals moving.	R5,760	3–6 hrs	R6k–R14k	Workflow file, setup guide, handover notes, 2-hr setup call
Lead Source Performance Tracker	Tracks which channels bring the best leads and pushes daily summary reports.	R6,430	2–4 hrs	R4k–R10k	Workflow file, setup guide, handover notes, 2-hr setup call

Marketing

Solution	Summary	Fixed Price	Est. Time Saved / week	Est. Value / month	What is included
Review Request Engine	Triggers review requests after service completion and routes positive responses first.	R4,560	2–4 hrs	R4k–R10k	Workflow file, setup guide, handover notes, 2-hr setup call
Content Repurposing Workflow	Turns one content input into multiple post drafts, captions, and publishing tasks.	R7,130	5–8 hrs	R7k–R18k	Workflow file, setup guide, handover notes, 2-hr setup call
Campaign Lead Nurture Flow	Moves new leads into timed email or WhatsApp nurture journeys.	R6,740	4–7 hrs	R6k–R16k	Workflow file, setup guide, handover notes, 2-hr setup call
Ad Lead Response Router	Pushes paid-ad leads to the right channel, owner, or CRM stage instantly.	R5,980	3–5 hrs	R5k–R13k	Workflow file, setup guide, handover notes, 2-hr setup call
Referral Tracking Workflow	Tracks referrals, source performance, and sends thank-you follow-ups.	R5,420	2–4 hrs	R4k–R11k	Workflow file, setup guide, handover notes, 2-hr setup call
Marketing KPI Digest	Builds a simple recurring summary of traffic, leads, and campaign performance.	R6,210	3–5 hrs	R5k–R12k	Workflow file, setup guide, handover notes, 2-hr setup call

Admin

Solution	Summary	Fixed Price	Est. Time Saved / week	Est. Value / month	What is included
Invoice Reminder Automation	Sends payment reminders and internal alerts on overdue invoices.	R4,980	3–6 hrs	R5k–R14k	Workflow file, setup guide, handover notes, 2-hr setup call
New Client Onboarding Pack	Sends forms, welcome documents, internal tasks, and kickoff reminders automatically.	R6,590	4–7 hrs	R6k–R16k	Workflow file, setup guide, handover notes, 2-hr setup call

Document Request Tracker	Automates chasing missing documents and logs outstanding items.	R5,740	3–5 hrs	R4k–R11k	Workflow file, setup guide, handover notes, 2-hr setup call
Internal Approval Flow	Moves requests through approval steps with status updates and escalation notices.	R6,860	4–6 hrs	R6k–R15k	Workflow file, setup guide, handover notes, 2-hr setup call
Meeting Summary Dispatcher	Sends structured AI-generated summaries and action items after meetings.	R5,630	2–4 hrs	R4k–R10k	Workflow file, setup guide, handover notes, 2-hr setup call
Staff Task Reminder System	Sends recurring reminders for deadline-driven admin work.	R4,790	2–3 hrs	R3k–R8k	Workflow file, setup guide, handover notes, 2-hr setup call

Operations

Solution	Summary	Fixed Price	Est. Time Saved / week	Est. Value / month	What is included
Job Status Update Workflow	Updates internal teams and clients as jobs move through stages.	R6,920	4–7 hrs	R7k–R18k	Workflow file, setup guide, handover notes, 2-hr setup call
Order Handoff Automation	Moves order information from sales to ops without manual re-entry.	R7,480	5–8 hrs	R8k–R20k	Workflow file, setup guide, handover notes, 2-hr setup call
Stock Alert and Reorder Notice	Triggers alerts when stock or consumables fall below thresholds.	R5,890	3–5 hrs	R5k–R12k	Workflow file, setup guide, handover notes, 2-hr setup call
Daily Ops Summary Dashboard Push	Compiles operational KPIs and delivers them on a schedule.	R6,350	3–5 hrs	R5k–R13k	Workflow file, setup guide, handover notes, 2-hr setup call
Service Ticket Routing	Routes service issues to the right team and logs priority automatically.	R6,770	4–6 hrs	R6k–R15k	Workflow file, setup guide, handover notes, 2-hr setup call
Workflow Escalation Engine	Escalates delayed tasks, blocked jobs, or missed SLAs.	R7,040	4–7 hrs	R6k–R17k	Workflow file, setup guide, handover notes, 2-hr setup call

Outside the Box

Solution	Summary	Fixed Price	Est. Time Saved / week	Est. Value / month	What is included
WhatsApp Concierge Assistant	Handles simple inbound questions and escalates real sales or support needs.	R7,260	5–8 hrs	R7k–R18k	Workflow file, setup guide, handover notes, 2-hr setup call
Voice Note to Task Workflow	Turns voice notes into tasks, summaries, and reminders.	R5,540	2–4 hrs	R4k–R10k	Workflow file, setup guide, handover notes, 2-hr setup call
AI Proposal Builder	Builds first-draft proposals from intake answers and internal templates.	R7,390	4–7 hrs	R7k–R18k	Workflow file, setup guide, handover notes, 2-hr setup call
Webform to Instant Estimate	Creates rough estimates or next-step recommendations from website submissions.	R6,680	3–6 hrs	R5k–R14k	Workflow file, setup guide, handover notes, 2-hr setup call
Knowledge Base Answer Assistant	Pulls answers from internal docs and prepares draft replies for the team.	R7,110	4–6 hrs	R6k–R16k	Workflow file, setup guide, handover notes, 2-hr setup call
Executive Daily Brief	Builds a daily digest of leads, jobs, cash flow prompts, and issues.	R6,460	3–5 hrs	R5k–R13k	Workflow file, setup guide, handover notes, 2-hr setup call

6.3 Custom Solutions Page

Objective: remove the fear that custom means complicated or unreachable. Sell custom work as practical, growth-oriented problem solving.

Recommended hero headline: Custom Solutions Built Around Your Business

Recommended support copy: Not every problem fits inside a pre-built package. When your bottleneck is unique, we map the process, build the right automation or workflow, and hand over a solution designed for the way your business actually works.

Recommended objection-handling block: Custom software and automation are often less expensive than the ongoing cost of manual rework, missed follow-ups, inconsistent handoffs, and owner dependency.

Recommended primary CTA on this page: Solve My Bottleneck

Seven-step process

20. Book a Call
21. Define the Problem
22. Audit the Current Workflow
23. Map the Best-Fit Solution
24. Build and Preview
25. Launch and Train
26. Support and Improve

Desktop presentation can use a horizontal process timeline if it remains readable. On tablet and mobile it should collapse into a vertical sequence.

This page may carry one of the 10% dramatic animation moments. For example: lines connect each process step as the user scrolls, or a hidden solution diagram gradually activates.

6.4 Who We Are Page

Objective: humanize the company, build trust, and reduce fear around technology.

Core story direction:

- We have seen the same blockers inside real businesses.
- Owners and managers get stuck carrying too much operational load.
- Manual systems create stress, delays, and avoidable lost revenue.
- We built this company to solve those practical business problems.
- We use these systems ourselves and believe in them because they remove real friction.

Key emotional angle: technology may feel intimidating, especially for people who did not grow up inside digital tools, but it does not have to stay intimidating. The company should come across as the translator between modern systems and real business needs.

Suggested page sections:

27. Intro block: what the company stands for.
28. Problem empathy block: the stress, bottlenecks, and owner burden.
29. How we work block: practical, not overly technical.

30. Technology without overwhelm block.
31. Trust block: tools, delivery method, support style.
32. CTA band.

6.5 Contact Us Page

Objective: create urgency without looking fake or desperate, then route users into a clean form flow.

Headline recommendation: Save Your Spot

Support copy recommendation: We work with a limited number of businesses at a time so we can implement properly, train well, and provide real support. If you want help this month, book early.

Urgency module requirements:

- Show a spots-left counter out of 15.
- Counter is front-end driven for now.
- Early month should show around 2/15 or 3/15 booked.
- Mid-month should show around 7/15 or 8/15 booked.
- Late month should usually show 13/15 booked.
- Final days may show 14/15 booked.
- Do not show 15/15 booked in normal operation.

FAQ block suggestions

- How long does setup take?
- Do I need to be technical?
- Do you offer support after launch?
- Can you adapt a pre-built solution to my business?
- What happens on the setup call?
- What if I need something custom later?

Contact form fields

- Name (required)
- Business Name (required)
- Email (required)
- Phone / WhatsApp (required)
- Enquiring About (auto-fill from selected package when relevant; editable)
- Notes (optional)

7. Global UX / UI Requirements

- Everything important should be center-aligned or center-contained.
- Use large, high-contrast typography.
- Keep section backgrounds distinct enough to make page rhythm obvious.
- Buttons should be visually decisive, with one primary CTA per section.
- Use cards with rounded corners, subtle glow edges, and strong hover states.
- Charts, KPI counters, and comparison visuals should feel clean and commercial rather than playful.

Interaction notes

- Hover states should feel responsive and premium, not gimmicky.
- Modals must lock background scroll and feel like a proper sales-detail view.
- Anchor navigation on Pre-Built page should animate smoothly to section positions.
- Scroll-linked background motion should be restrained so it does not hurt readability or accessibility.
- On mobile, any decorative side motion should simplify significantly.

Accessibility and build standards

- Meet WCAG-friendly contrast wherever possible.
- Respect reduced-motion preferences.
- Do not rely on color alone for meaning in comparison charts.
- Use semantic headings in correct order.
- Forms must be keyboard accessible.
- Modal focus management is required.

8. Functional Notes for Front-End

8.1 Contact form auto-fill logic

If the user clicks Book a Call from a pre-built package card or modal, the contact form should open with the Enquiring About field pre-filled with that package title. The user can still edit the field.

8.2 Suggested spots-left logic

The contact page urgency number should be deterministic, month-based, and believable rather than random on each refresh.

```
Pseudo-logic:
- Get current day of month and total days in month.
- Convert to month progress percentage.
- Map progress to booked slots out of 15.
- Keep booked count low early, mid-range in the middle, and high late.
- Add small stepped variation by week bucket, not by every page load.
- Clamp result between 2 and 14.
Example bands:
  days 1-7   -> 2 to 4 booked
  days 8-14  -> 5 to 8 booked
  days 15-21 -> 8 to 11 booked
  days 22-27 -> 11 to 13 booked
  days 28+   -> 13 to 14 booked
```

8.3 Trust and proof modules

Use logo carousel, review cards, KPI strips, and proof counters as layout modules. Placeholder assets are acceptable in design phase but must be clearly flagged for replacement before production.

9. Guidance for the UI/UX Designer

- Design the site as a sales conversation, not a corporate brochure.
- Use page rhythm intentionally: hard claim, visual proof, explanation, CTA, relief, CTA.
- Keep hero areas bold and uncluttered.
- Use data-style visuals to imply measurable business value.
- Different page backgrounds should feel related, but not repetitive.

- Plan for strong desktop visuals and disciplined mobile simplification.

10. Guidance for the Junior Front-End Developer

- Do not overbuild the site. The project is visually polished but not performance-heavy.
- Prioritize clean structure, responsive spacing, and reusable components.
- Build shared card, modal, CTA, stat, FAQ, and section-shell components first.
- Keep animation layers separate from content layers.
- Use placeholders where backend or data is not ready, but code the structure so real data can slot in later.
- Implement anchor links, modal logic, form auto-fill logic, and the booked-slots rule cleanly.
- Treat visual consistency as part of the job, not a final polish step.

11. Testimonial and Trust-Signal Policy

During design and prototype stages, testimonial layouts and logo strips may use placeholders. However, invented testimonials should never be published as real client proof. Replace with genuine approved proof before launch.

Safer placeholder format for design mockups:

- First name + role only
- Short result-oriented quote structure
- Neutral company badge or logo placeholder
- Internal watermark such as PLACEHOLDER in mockup files if needed

12. Footer Requirements

- Brand mark / wordmark
- Short company sentence
- Quick navigation links
- Contact email placeholder
- Terms and Conditions
- Privacy Policy
- Copyright line

Keep the footer cleaner and shorter than Acquisition.com's current footer, but still professional in structure [R1].

13. Open Items / Future Inputs Needed

- Final company name and final logo
- Approved brand font pairing
- Final image library / custom illustrations
- Real testimonials and real client logos
- Final legal copy
- Final pricing validation
- Final call-booking and lead-routing process
- Whether to expose n8n by name in any trust or implementation section

14. Research Appendix

The following reference set informed the direction of this handoff. These sources should guide copy framing, trust structure, and placeholder stat selection. Re-verify all launch claims before publishing.

Ref	Source	Use in this document
R1	Acquisition.com Home	Current homepage shows a direct hero, CTA, offer blocks, FAQ, founder proof, and strong footer structure.
R2	Acquisition.com Book a Workshop Call	Uses a direct CTA-first page with testimonials below the hero.
R3	Acquisition.com Roadmap	Uses a short-form conversion page with a direct form and proof cue.
R4	McKinsey, The State of AI: How organizations are rewiring to capture value (2025)	78% of respondents reported AI use in at least one business function.
R5	McKinsey, The economic potential of generative AI: The next productivity frontier (2023)	Work automation combined with generative AI could add 0.5 to 3.4 percentage points annually to productivity growth.
R6	McKinsey MGI media summary (2023)	Related productivity framing and economic potential explanation.
R7	IBM, AI in Action 2024 Report	Among AI Leaders, about two-thirds reported AI drove greater than 25% improvement in revenue growth rate.
R8	IBM, The Impact of AI / AI decision-making insights	Further supporting IBM interpretation of leader-reported AI outcomes.
R9	PwC US, AI Agent Survey (2025)	66% of adopters reported increased productivity; 57% reported cost savings.
R10	n8n Sales workflow category	Used as directional inspiration for common sales automation package types.
R11	n8n Marketing workflow category	Used as directional inspiration for common marketing automation package types.
R12	n8n AI workflow category	Used as directional inspiration for AI-driven workflow packaging.
R13	n8n IT Ops / support / productivity categories	Used as directional inspiration for operations and admin package patterns.
R14	n8n template examples such as scheduling, lead generation, and support flows	Used to validate breadth of pre-built template possibilities.

Implementation note: the research above should influence layout logic and proof structure, not push the site into copied branding. The goal is inspired conversion architecture, not imitation.

Final publication note: every public claim about savings, revenue, or time recovered should be reviewed against the actual package capability and the final approved evidence set.
